

I-25 to San Acacia exit (Exit 163). East into San Acacia, which consists of a few homes. North (left) at the fork, past a cemetery on the left, past a pair of gates flanking a small house on the left w/barking dogs. The gates contain several locks--the Sevilleta lock is a combo lock, the combo is on your Sev NWR permit. The gates are usually left open during the day. If you find them locked, it's best to re-lock them--be sure to relock the gate so that the other individual locks are all able to free the chain. Continue past the hair-pin curve, over the canal, across the RR tracks, to the diversion dam.
